Council Sets Date For The Court of Revision

Will Sit in Council Chamber on June 4th, at 8 p. m.

A regular session of the Town Council was held last Monday evening with Mayor Cox in the chair and councilors Brydie Myers, Newman Sangster and Anderson present.

Mr. Benjamine waited on Council and asked to be allowed to supply gravel for streets from gravel pit north of town instead of from the river as the water is too high to secure gravel. Council decided that if gravel was satisfactory they would be agreeable to his proposition.

Messrs. Hewston and Kilner waited on Council and asked for work in order to procure provisions.

W. R. Willis wrote Council offering $20 for house in west end of town. As the house in question was not in the town's limits, council could not dispose of same.

E. N. Rose wrote offering $10 for barn sub from old Young building. The matter was left to the building committee.

Mr. B. Moore wrote, offering current taxes for lots on Main St. The offer was accepted on motion of councillors Myers and Newnham.

Applications from renters of town property for repairs to their buildings were not considered by council.

The date for the Court of Revision was set for Monday, June 4th, at 8 p.m. to be held in the Council chamber.

The date for the tax sale of town property in arrears for taxes was set for Saturday Aug. 25.

On motion of councillors Sangster and Sanderson the Secretary was instructed to interview Wong Tong regarding water rates for land being used by him on Greenhouse property and report at next meeting.

A motion was passed authorizing town foreman to turn off water on certain properties if water account arrears were not paid by the end of this month.

Redcliff Young Couple Married Last Thursday

Johnson —Goodine

A quiet wedding was solemnized in St.Barnabas church, Medicine Hat, on Thursday afternoon May 10th, when Vera eldest daughter of Mr.and Mrs. A. R. Goodine, of Redcliff, was married to Mr. Edward Johnson eldest son of Mr. and Mrs. K. Johnson also of this town.

The bride was dressed in a swagger suit of powder blue with white accessories and was attended by her sister Mary who was dressed in a navy blue suit with white hat and gloves. The groom was assisted by his brother, Mr. Arthur Johnson.

Only the immediate relatives of the contracting parties witnessed the ceremony, Rev. Mr. Butcher officiating.

After the ceremony, the wedding party proceeded to the

Junior Footballers Lose to The Rangers

First Game Played Here Last Thursday Evening

The first football game seen here for some time was played last Thursday evening between the Rangers from Medicine Hat and the local juniors. There was a good attendance and. all were well pleased with the exhibition put up.

The team were very evenly matched. While Redcliff showed up to advantage in their rushes they fell down badly in shooting, which accounts for their losing the game. The score at the finish was 2 goals to 1 in favor of the visitors.

Redcliff scored first and held the lead to the end of the first period. In the second period, however, the visitors showed a big improvement and ran in 2 goals, which the locals tried hard to duplicate but failed.

These two teams will meet again in Medicine Hat at the sports day program on May 24

Red Cross To Hold Membership Drive

Will Commence on the Week Beginning June 3rd.

A meeting of the Red Cross executive was held in Gordon Memorial Schoolroom on Tuesday afternoon. Routine business was carried through. The Society will continue to sponsor the Well Baby Clinic during the summer. Rev. H. S. Hamnett was elected vice- president in place of Rev. P. M. Stewart. It was decided to hold the annual Membership Drive in the week beginning June 3rd. For this purpose, representatives of the Roman Catholic Church will canvass the north side of Broadway and all north of Broadway, Anglican representatives east side of Third St. and all east including south side of Broadway, United Church representatives west side of Third St. and all west including south side of Broadway.

The Society requests that the canvassers be cheerfully received, and hopes there will be a hearty response in donation. Any contribution is welcome. The requisite for membership is One Dollar.

Next Thursday being Empire Day and a public holiday in the Dominion, all the stores in town will be closed. Do your shopping in time.

'White Lunch' where a dainty wedding supper was served.

The young couplele left on the evening train for Lethbridge, where they will spend a short holiday before taking up housekeeping on First Street.

YOUNG —BANKS

At Havre, Montana, on April 27, 1934, Ruby May Banks of Medicine Hat, daughter of Mr. and Mrs. Chas. D. Banks, was united in marriage to Cecil Clarence Young, son of Mr. Jack Young and the late Mrs. Young of Brooks, Mr. C. E. Artman J. P. officiating.

The Week at Ottawa

Ottawa, May 12th, 1934

Early Sunday morning Mrs. Rhodes passed on at the age of fifty-three. Her eager interest in life and public welfare was shown by the fact that she had been attending at the committee where monetary reforms were being discussed.

On Monday I voted with the U. F. A. members against all the other Liberals and all the Conservatives. I did this because I felt that an important money suggestion was being cut on a technicality and I still think I was right. The working of the recently invented machines and the competition of other nations, such as Japan and Russia, will force British people to change the money system in order to distribute their goods.

The vote stood 100 to 13 which shows that sentiment in favor of reforming the money system is not as yet very strong. Japan has increased her exports by 53 per cent. during the last year even in Manchester, England, men's shirts made in Japan are selling for 30c and the great mills of that city cannot get out a similar shirt for less than 70c. Great Britain and some of the Colonies have acted quickly by almost excluding Japanese goods. This may be the beginning of a new movement that will result in unfriendly national relationships.

The people of the Orient can produce goods cheaply as men work 12 hours for 20c, and then Japan makes use of her national credit to give a bonus of 50c on each dollar's worth of goods exported.

Mr. Bennett, looking to be in the pink of condition, comes into the House occasionally. He says he never worries and gets a long rest every night. He is supposed to have given the Conservative members a promise that there will be no election this year.

Little progress was made this week. Mr. King is urging the government to bring down the new Election Act and the Public Works program. The Prime Minister promised to bring these measures down next week. The difficulty the Minister is having with the Public Works Bill, is to decide where to draw the line. Members are urging that sewage disposal and similar improvements are needed in their own districts but the government does not seem to be willing to produce the money.

The Marketing Bill will be changed but there is again trouble is framing it to meet the present needs

The Stevens' Committee is investigating the Imperial Tobacco Company. This concern controls 70 per cent. of the business The social justice of the officers of the company getting huge salaries and bonuses while the growers were only given starvation prices, was giving food for serious thought. Six officers in 1930 got salaries totalling $507,099, and this does not include the dividends on the stock they may have owned.

F. W. Gershaw

To Hold Annual Stampede Here Dominion Day

Committee Appointed To Make Necessary Arrangements

The annual meeting of the Redcliff Stampede Association was held last Tuesday evening and was reorganized for this season.

It was also decided to hold the annual stampede on Dominon Day which will be observed on Monday July 2nd. this year.

Committees were appointed to make the necessary arrangements and draw up the program for the different events. Besides the usual prizes for bucking contest, steer riding, horse racing etc., there will also be a good program of athletic events in which the Rangers' Athletic Club of Medicine Hat is co-operating and the usual program for school children.

The following officers were elected:

Hon. Pres— Hector Lang.
Pres.— Ed. L. Stone
Vice. Pres.—F. Baird.
Sec.— H. Dacre.
Treas.— R. S Hodge
Com. —Messrs. G. H. Worts, R. N-Rose, J. N. Dacre, C. G. Buchholz, J. R. McKenzie, R. C. Hargrave, H. Sangster, J. Deanks, W.Campeau G. Dickson, A. Willimson, F. Walker, J. Ellis A. Dubeau, D. Whitney, A. McKinnon, W. Hill, A. Fitzhenry, L. R Stone, F. Walker, Jr., J Dacre, J. Bergeron A. E.Shaw, M. Rindahl, Bert Allison, H. J. Cox.

Publicity:— R. N. Rose, G. H. Worts and H. Dacre.

Athletic Com. —F. Baird, R. S. Hodge, J. Bergeron and H. Lang, B. Buchannan, J. Levinson of Medicine Hat.

School Sports:— R. S. Hodge A J. Learmonth and W. King.

Managers.— R. N. Rose and J. N Dacre.

Redcliff Reminiscences

Taken From Our Files Of May 21st, 1915

Town dog causes commotion in Calgary. Leo Walsh had a valuable bull terrier which he slipped to a lady friend in Calgary. After putting the dog on the train he wired to his lady friend: "Danger on the next train." As the War was at its height this looked suspicious The police got busy and found the dog's name was "Danger" and that nothing serious was contemplated.

• • •

G.G. Patterson was elected chairman of the school board at the meeting last Monday.

• • •

The second Canadian Division has landed safely in England and will be quartered at Shorncliff.

• • •

A farewell service for soldiers who are leaving shortly with the Mounted Rifles, was held in St. Ambrose Church on Sunday.

• • •

The officers of the Mounted Rifles were entertained to a farewell send-off by the Redcliff Club last night.

Two League Softball Games Played Monday

Girls Win From Teco But Boys Lose to Medaltas

Last Monday evening two league Softball games were played in which Redcliff girls and boys' teams took part.

The girls played the Teco team here and won out by a score of 8 to 4 runs. At the same time the Red Caps met defeat at the hands of the Medaltas in Medicine Hat by 19 to 9.

The girls' game was a humdinger for excitement. Up till the last half of the sixth the score was 3—2 for the visitors and during that time some real snappy ball was played but the home girls appeared to be weak at the bat, connecting only with infield flies. In their half of the sixth, however, Redcliff girls went on a batting spree and filled the bases. Before the side was retired four runs were scored and one, a homer, by Susie Skidmore.

The boys were not so fortunate, although they put up a good showing and kept in the running till their end of the sixth. In the last of the sixth Medaltas started a merry-go- round and took a big lead which the Red Caps could not overtake. The local lads are showing some improvement in every game.

Junior Footballers Organized Thursday

Will Enter Junior Contest in Medicine Hat, May 24th

At a meeting held in the local armory last Thursday evening, the junior football club was organized for the season. There was a good attendance and all were enthusiastic over the prospects for this season in this line of sport. The following officers were elected:

Hon. Prests.—R. S. Hodge, J R. MacKenzie, R. Pedersen
Pres.— A. N. Collard.
Vice Pres.—W. Willis.
Sec.-Treas.—A. G. Osgood.
Ex. Com.—W. Lawson, G. Davies, T. Fairhurst.
Coach:— Sid Paterson
Trainer—G. Davies.
Social Com.—G. Kitchen, W Palmer, John Dutton, A. Podesta, Jim Dutton.
Capt.—W. Paterson.
Vice Capt.—Jim Dutton.

The boys are now practising for their game with the Rangers at the sports day in Medicine Hat on May 24th.

PROSPERITY IS RETURNING

"Street cleaners report cigar stubs are not nearly so short.

"Spare tires are beginning to appear on tire racks.

"It is safe to leave children's yanks around the house.

"People are saying, 'Won't you stay to dinner?' —as if they meant it.

"Men are getting haircuts almost regularly.

"Women report a gradual improvement in the quality of bridge prizes, and nobody has won a Woolworth lamp shade in several weeks."

• • •

Be with the cowd at the Athletic Port next Thursday evening.

Big Sports Day in Medicine Hat on May 24th

Good Program, Athletic Events Road Race From Here

Victoria Day, which falls on May 24 will be celebrated in the Hat" this year by a Sport Fest comprising softball, football and lacrosse games together with a variety of track and field events making a continuous four hour program.

This afternoon of sport is being sponsored by the Rangers Athletic Club of Medicine Hat with the assistance of the Rotarian and Kiwanis Clubs.

The purpose of the sportsmen behind the Ranger's Club is to bring sport back in this district and this can be done by building for the future through the younger generation. There is nothing classy about the Rangers nor are they seeking to grab up a lot of empty honors for their club.

They want competition for it is only through competition that the club can survive and fulfil its objects. If they succeed in awakening again the old sporting spirit in this district that has suffered so from the depression, the Rangers will have justified their existence.

The Victoria Day Meet will be the debut of the Club into the sporting world and the Rangers are naturally anxious that it be a success.

Redcliff athletes are therefore invited to participate in the various events especially in the Redcliff —Medicine Hat road race for the Caldonian Cup.

In the track and field events there is an age limit of twenty-one years and under, but the road race is open to all.

The closing date for entries May 19th. and all entries must be in the hands of the secretary or before that date. The meet will be run under amateur rules. Entries should be sent to Elmer Fleming Sec. Rangers Club, Medicine Hat.

Wheat Prices And Economic Experiment

International experts of the wheat advisory commission have been engaged, at Rome, in studying ways and means of raising wheat prices, and, according to press despatches of recent date, have reached decisions which will be submitted to the governments of the signatory countries for approval and, it is presumed, concerted action. Decisions, it is stated, must be ratified in time to permit their implementation by June 1.

Details of the plan which have emanated, so far, from the conference at Rome, are not complete enough to warrant analysis with a view to computing their effects. Apparently, however, it is proposed to employ a price-fixing system to regulate exports rather than the commoner process of regulating exports to control price fluctuations. Apparently, too, the intention is to base the minimum price of wheat on the relation between export supplies and the month to month demand, with the London quotas rigorously adhered to by the exporting countries.

Nothing has been said so far as to the price objective. Undoubtedly, however, unless it be the 63.62 gold cent price computed as the "average price of all parcels of imported wheat of all grades sold during each week in all the ports of Great Britain", the terms of the London agreement, as they apply to the exporting countries, will be rendered nugatory. This is the price which, according to the agreement, must be reached and maintained over a period of sixteen weeks, before scaling down of customs tariffs begins.

Western Canada awaits with interest and expectation complete details of the proposals drafted by the experts for submission to the signatory nations. Price, of course, is a matter of paramount importance to the farmers of the prairie provinces, and if, by agreement, the world price can be raised and stabilized, a long step will have been taken towards stabilizing the agricultural industry in Western Canada. It is impossible here to talk of lowering production costs while debt and other charges remain as a high and uncontrollable overhead factor in them.

Of scarcely less significance to the prairie farmer is the matter of lower customs duties against Canadian wheat in the importing countries of Europe. If then, in addition to raising world prices, there is an adjustment downward of tariffs associated with wholehearted efforts by the importing countries to increase consumption of wheat and at the same time to reduce domestic production, western agriculture may assume with some hope of fulfillment and success, the task of orienting itself to the new economic objective. That is to say, if the spirit of the London agreement is observed to the letter of its various terms, there is no obvious reason why, once the carryovers are disposed of, Canada's export quota should not progressively increase pari passu with her ability to consume the products of industries indigenous to her best customers. Signs already are conspicuous that the ultimate determinant of positive or negative reaction to the terms of the London agreement by the importing countries will be the "balance of trade".

Throughout the world, a series of exceedingly interesting and vitally important economic experiments are underway, with the various nations engaged in concerted efforts to set their own productive processes in order. The United States is seeking prosperity and stability through the agency of the Roosevelt "New Deal". Mussolini has his corporative state with industry organized on a national basis, acting as "economic advisor" of the government. Germany is essaying recovery through a process of state intervention, and Austria apparently is preparing to adopt the Italian model. Russia, of course, is seeking to gear the productive machine to the needs of her people, through socialization. In Britain, the means to recovery is styled "rationalization". All the experiments have one element in common—government intervention, government control and government regulation. The same trend is patent in Canada, for recent legislation has laid foundations for a wide range of machinery for control and regulation, which is to be erected and made operative as conditions determine.

Value Of Birds

Rev. B. F. Henry of Pratt, Mass., in placing the value of the various species of birds, said the meadow larks are worth $2 each. "The robin," he said, "is worth its weight in gold." In setting the value of the robin, Rev. Henry declared it does great work in eliminating garden and lawn pests, while the meadow lark also helps the farmer by assisting in ridding his fields of the smaller pests.

World's Cheapest Air Rate

The world's cheapest air service has been inaugurated between Glasgow, Belfast, and London. The service will cost passengers not more than a penny a mile. Equipped with two motors of 450 horsepower each, the planes will carry 15 passengers and two pilots. The Southern Railway Company is now operating an air line between Croydon and the Isle of Wight.

Smothering Sensations Faint and Dizzy Spells

MILBURN'S HEALTH AND NERVE PILLS

These feelings of faintness; these dizzy spells; these all-gone smothering, sinking sensations which come over people, from time to time, are warnings that should not go unheeded. They indicate an extremely weakened condition of the nerves and other vital organs, and should be given immediate attention.

Those suffering in this way will find in Milburn's H. and N. Pills a remedy with which to recuperate their health, build up their run down system, and bring back their bodily vigor.

Ask your druggist for Milburn's H. & N. Pills.

Thousand Miles An Hour

Astonishing Things Predicted By Sir Charles Kingsford-Smith

Whirling through the stratosphere at well over a thousand miles an hour in the hermetically-sealed cabin of a giant air liner, guided entirely by wireless control stations on earth—can you imagine the possibility. Sir Charles Kingsford-Smith, hero of the recent record-smashing flight to Australia, believes this not only possible, but likely. In an astonishing vision of aerial development within the next fifty years he foresees air travel brought to such a pitch that ships and railways will become semi-obsolete, their sole use being as carriers of heavy freight.

"There will be no human pilot, but gyroscopic control," said Sir Charles. "The huge flying liners which will move through the stratosphere at a uniform speed of 1,200 miles an hour, carrying 100 passengers in their luxurious cabins, will be fitted with super-efficiency, super-charged engines and variable pitch propellers.

"Risk will be negligible. Each 'plane will have ten, twelve or fifteen engines, all in the event of one cutting off, the officer in charge will simply declutch that engine from the propeller while the mechanics repair it en route. Crude oil will probably be used as fuel."

Actually, to accomplish the amazing speed of which Sir Charles speaks we do not require more powerful engines than some already built. The atmospheric density 60,000 feet above the earth is about a quarter of what it is here, so that an engine, which under normal conditions to-day attains the high speed of 350 miles an hour, would hurtle through the rarefied atmosphere at 1,400 miles an hour.

Rich Collection For Museum

B.C. University Receives Rare Specimens From Dr. Fraser

The University of British Columbia will be enriched by a collection of hundreds of species of marine life, many hitherto unknown to science as a result of an 8,500-mile cruise through the south Pacific by a scientific party of which Dr. C. McLean Fraser, professor of zoology, was a member.

Dr. Fraser returned to Vancouver after an absence of three months. He declared that the expedition involved very little romance, but much hard work. He expects the discoveries made in the comparatively virgin scientific field off the coast of South America will have important bearings in the study of marine flora and fauna.

The specimens collected ranged from snakes and monkeys found on shore to sea serpents, brilliantly tinted "angel" fish and crustaceans. Dr. Fraser, being a world authority on a minute form of sea life known as hydroids, brought back a large number of formerly unknown types for the university museum.

PRICES RISE BUT TEA STILL MOST ECONOMICAL

Three years of disastrously low prices for tea finally goaded the growers into action and committees were formed a few months ago to control production. Prices have already advanced and as a result merchants have exhausted their present stocks the housewife will have to pay slightly more for her favourite beverage. Finest teas such as "Salada" still produce about 5 cups for a cent.

A Double Nasturtium

New Flower Developed By Successor To Luther Burbank

A double nasturtium that "looks like an asters and ranges in color from lemon yellow to scarlet," has been developed at Philadelphia.

It was created by David Burpee, who has continued the work of Luther Burbank in developing new varieties of plants.

The new flowers have attracted considerable attention at the recent local flower shows, where they have been called "the poor man's orchid."

Teaching "Jiu Jitsu"

Miss Dorothy Curtis, recently returned from Japan where she has been teaching school for three years, has enrolled for her final year at the University of Wisconsin. In order to help pay expenses, she has organized a "jiu jitsu" class for girls. Miss Curtis, proficient in the art herself, says she has some promising students.

First book printed in America was the "Escala Espiritual de San Juan Climaco"; no copies are known to be in existence.

Yacht Cup Race

Mrs. Sopwith Will Act As Timekeeper On The Endeavor

Mrs. T. D. Sopwith, who will act as timekeeper on her husband's challenging yacht, the Endeavor, when it attempts to wrest the America's cup from the United States this summer off Newport, R.I., is anticipating the thrill of her life.

In every race of the series she will stand close beside Mr. Sopwith at the wheel, a stop-watch grasped in either hand, advising him to the second the time the Endeavor has made on each leg of the run, the time of its opponent, how they stand. It's important.

"I wouldn't miss it for anything in the world," she told the Associated Press when interviewed at the Sopwith's handsome town residence in Park Lane. "I always act as timekeeper in our races, but this, of course, will be the biggest of all."

"You may be sure I won't wear trousers," she said. "Just a skirt and blouse and jacket. If there's a heavy sea I have a waterproof."

Historic Treasure Prized

Old Sword Once Flashed At Battle Of Waterloo

An historic sabre that once flashed in battle under the colors of King Louis XVI. of France is a relic highly treasured today by Auguste de la Tremaudan, who was established at Montmartre, Sask., 1893.

It is the sabre of Baron de la Villabeau, Tremaudan's grand-uncle, who was brevetted lieutenant by Louis XVI. in 1785. The baron took part in all the campaigns of Louis XVI, including those of Napoleon on the march to and from Moscow, the battle of Waterloo and the defeat of Bonaparte. He died in 1836 and the sabre passed on to Tremaudan.

The four-year-old pioneer of this little village migrated from France in 1873 and established his home at Chrysostom, Chautauguay county, Quebec. He moved west 20 years later.

Light Refreshments

Police Of New York Evidently Have Hearty Appetites

New York's "Finest" may not be either wealthy or wise but they are certainly healthy, judging from the recent exploit of 6,000 policemen.

On a special occasion these "Coppers" had breakfast together recently and here is what they are reported to have eaten: 5,000 grapefruit, 1,200 pounds of oatmeal, 24,000 eggs (scrambled), 2,500 roast chickens, 4,500 pounds of potatoes, 12,000 sausages, and 1,000 pounds of sugar.

This light snack was washed down with 900 gallons of coffee, 800 quarts of milk, and 1,250 quarts of cream.

If the reader chooses, he can figure out the exact share of the average policeman for himself.

School Age At Eight

Children should not be permitted to go to school until they reached the age of eight, in the opinion of Dr. Laurence P. Folsom, president of the New England Council of Optometrists. "The eyes of the human being," he says, "do not reach the state of maturity until the child is eight years of age, and much of the unnecessary strain to which we subject the eyes of children in the classroom should be avoided to insure healthy eyes among the future generations."

About two-thirds of the road mileage in the United States still rates as "unimproved."

The Caspian sea is the world's largest inland sea.

Agricultural Notes

Many Items Of Interest To The Western Farmer

In Canada the European earwig is found only in the province of British Columbia.

The major commercial areas in Canada producing table stock swede turnips for export are Ontario and Prince Edward Island.

According to prevailing estimates the Canadian sugar beet acreage in 1933 was about 2 per cent. lower than in 1932.

The total annual production of clovers and grass seeds in Canada has remained about the same in recent years.

Canada has a world-wide reputation as a producer of alsike, Ontario seed having dominated world markets in quality and price for many years.

The Canadian milling industry provides a market for about 15 million bushels of Canadian grown barley in the manufacture of food products and feeds.

There appears to be a good future for certain varieties of prunes grown in Canada for drying purposes. The imports of prunes in 1932 fell to $585,327 from $717,525 in 1931.

The expansion of tobacco production in Canada from 13 million pounds in 1921 to 54 million pounds in 1932 has given rise to difficulties in marketing the crop to advantage.

Green, wax podded beans, and also beans for baking, are staple products for which cannery requirements depend upon crop conditions and carry-over, the domestic demand being fairly constant but the export prospect small.

In Eastern Canada many farmers who some time ago went out of sheep on account of poor fence protection are now in a position to go into sheep raising again, wire fencing being gradually substituted at a moderate cost for rail fences.

The Canadian malting industry furnishes an outlet for a relatively small amount of high grade malting barley grown in Canada. This demand has increased steadily in recent years, and in 1932, 5,441,000 bushels of barley were used by maltsters.

The commercial production and demand for Sweedish, western rye, and crested wheat grass seeds is practically limited to the prairie provinces, where last year 900,000 pounds of brome, 225,000 pounds of western rye and 3,000 pounds of crested wheat grass commercial seeds were produced.

The increase in the 1933 potato crop in Canada over 1932 is partly due to increased acreage and partly to higher yields per acre in certain provinces. The 1933 crop is estimated at 41 million cwts., which is four per cent. above 1932 and 10 per cent. below the 1928-32 average production.

The acreage and tonnage of grapes in Canada has shown a steady increase since 1920. The future of the grape market is bound up with the wine industry, as the productive acreage of grapes in Ontario will never supply the fresh fruit markets and the apparent winery requirements.

The increase in dairy cow and heifer population in the Western provinces points to a continuation in 1934 of the level of dairy production reached in 1933, providing that the range in relative prices between dairy products and beef remains the same.—The Agricultural Situation bulletin.

Like Good Old Days

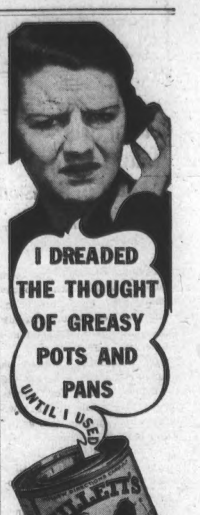
Useful Home Production Idea Revived By Alberta Settlers

The "good old days" have come back to the rural district of Erskine, Alberta, with a return to useful home production. The same engine that has chopped a generous supply of wood for the summer months also runs a chopper that grinds wheat into breakfast food. From hides men fashion everything from moccasins to coats.

Sugar beets provide syrup which, combined with yeast, gives the settler vinegar, and women, so prolific in the knitting of socks, sweaters and caps, have revived talk of the old spinning wheel.

A lifeboat has been designed which is equipped with rotating rims at bow and stern on which it can be slid down beside of a ship safely no matter what the ship's position may be.

Six out of ten people have one leg shorter than the other, according to a noted physician. Is that why they run around in circles?



I DREADED THE THOUGHT OF GREASY POTS AND PANS UNTIL I USED

It cuts through grease—makes messy kitchen jobs easy!

DON'T be a slave to kitchen chores. Just use a solution of one teaspoonful of Gillett's Pure Flake Lye dissolved in a quart of cold* water. It puts an end to stubborn stains. Lifts grease and grime off like magic!

Gillett's Lye is indispensable for all your heavy cleaning . . . for stopped-up drains . . . for toilet bowls. Order a tin from your grocer today. Say good-bye to hard rubbing and scrubbing!

*Never dissolve lye in hot water. The action of the lye itself heats the water.

FREE BOOKLET—Be sure to get the new revised Gillett's Lye Booklet . . . it tells how this powerful cleaner and disinfectant will lighten dozens of household tasks. Contains full information for soap making, thorough cleaning and other uses on the farm. Write for free copy to Standard Brands Limited, Fraser Ave. & Liberty St., Toronto, Ont.

GILLETT'S LYE EATS DIRT

For War Prevention

A resolution asking government control of key minerals as a method of war prevention, endorsed by the Vancouver Women's Canadian Club and the Calgary Business and Professional Women's Club, will be sent to the League of Nations Society, at Ottawa, for further action.

YOU'LL HAVE "BETTER LUCK" WITH RIT

NEW! No longer a soap! Dissolves Instantly.

Figures Recently Released Show The Important Position Held By Agriculture In Canada

A graphic illustration of the increase in farm production in Canada since 1890 is found in figures compiled by the Dominion Bureau of Statistics.

Production of wheat, the great staple crop, mounted from 42 million bushels in 1890 to over 420 million bushels in 1930, an increase of tenfold. The increase of oat harvests from 83 million to 423 million bushels was over fivefold. Other grains although grown on a smaller scale have shown even greater relative advances. The rate of increase of field crop production, has been much greater than that of animal products, livestock and animal products having roughly doubled in the same period. Cattle sold and slaughtered have increased from 958,000 to over 2,000,000 and swine sold and slaughtered have risen from 1,800,000 to 3,800,000. Production of milk and eggs has likewise been doubled. The area of field crops, given as 15.6 million acres in 1890, had grown to 58 million acres in 1931, an increase of 272 per cent. during the forty-one years.

In 1890 the total agricultural output was valued at 294 million dollars, with the mineral output valued at 17 millions, and the manufactures amounting to 476 million dollars. Agricultural production in 1930 had risen to 1,268 million dollars, mineral production to 280 millions, and the value of manufactures to 3,429 millions. Although the value of agricultural products relative to manufactured products fell from 62 per cent. to 37 per cent. as industrialization gradually expanded, the growth of manufacturing depended in no small part upon expansion in agriculture. In 1931 the value of farm products used by manufacturers was over 30 per cent. of the value of all materials used, and approximately 25 per cent. of the gross value of products manufactured was accounted for by manufactures of Canadian farm origin.

About 37 per cent. of the value of all export trade in 1890 was made up of wheat, barley, oats, rye, seeds, vegetables, fruits, tobacco, hay, cattle, hides and skins, milk and cream. These products formed 25 per cent. of the value of all exports in 1930.

People Becoming Robots

Small Per Centage Are Thinkers In This Machine Age

Sir Ernest Benn, speaking at a luncheon of the Incorporated Sales Managers' Association in London, declared that there were not 2,000,000 people in the world who could think. The youngster of to-day, he said, starts in an education machine which is a mass-production machine. When he goes to work his whole life must be regulated. Outside his work he reads a newspaper produced to attract the coppers of the million. He listens to the wireless, and has the soul destroying experience of knowing that he is applying his heart and mind—so far as he has got any—to the same tunes or words that a million others are absorbing. He goes to the cinema, and, whether he likes it or not, absorbs all the atrocities that come out of Hollywood. This young man is being compelled to become a Robot in a fatalistic scheme of things which must cause him to believe that he can count for very little. In Russia and Italy the people were doomed to ignorance by order. The same process was beginning in Germany.

Honesty Of The Orient

Japan paid 2,000,000 gold francs to the League of Nations and officially interpreted the action as meaning that, though that country resigned from the league, it intends to pay its obligations promptly while still legally a member. The payment cheered league circles considerably because some other countries owe a total of some 22,000,000 francs in membership fees.

Predicts Many Icebergs

Lieutenant Commander Edward H. Smith, United States Coast Guard, an expert on icebergs, predicts that this year approximately 630 icebergs will come south of Newfoundland toward trans-Atlantic ship lanes. He has been studying meteorological conditions for several months in European and North Atlantic countries.

It was not until after the civil war in the U.S. that the tomato reached the northern states, although well-known in the south.

Coal Found Near Aklavik

Will Prove Boon To Residents Of Isolated Districts

Discovery of reputed good quality coal in the barren outlying districts of Aklavik promises a boon to scattered residents of this little community, isolated on the outer edge of the Arctic rim.

Discovery of the vein, six feet deep and within a few miles of the settlement, would eliminate the difficult haul by scow of 90 miles from Fort Norman, and would bring a dependable supply of coal, described in quality as equal to the best lignite of Edmonton mines.

At present the main source of fuel is the rapidly thinning scrub bushlands along the winding shores of the river, and the shipments of coal from Fort Norman. The imported coal, however, is of soft quality and "powders" too easily to be used extensively. Cost of $25 per ton also is almost prohibitive for settlers, and even in institutions such as the Church of England mission and hospital crude oil is used extensively.

Serves Two-Fold Purpose

Headlight Of New Streamlined Train Has Vertical Beam

The headlight of the new streamlined railroad train is designed to serve a two-fold purpose. In addition to directing a powerful beam of light far down the track another shaft of light of great brilliancy is shot directly upward far into the sky. This vertical beam is designed to serve as an extra factor of safety, as it can be seen at great distances and warns motorists and others of the approaching train, thus eliminating the danger of collisions.

JUST A LITTLE PLAY FROCK—YET TOO CUTE FOR WORDS FOR PARIS HAS A WAY OF MAKING IT ADORABLE

Stacks and stacks of washing frocks—never a one too many for normal little girls who love to romp and play.

This cunning bloomer dress answers mode's call in French blue and white dimity. Note how darling it is with the sash across the back. The scalloped collar is white organdie.

See for yourself what a simple affair it is to fashion.

Tissue gingham checks, candy striped percale, pastel cotton broadcloths in plain or print, linen, etc., are sturdy, smart materials for this dress—and the matching bloomers which you must not forget!

Style No. 673 is designed for sizes 2, 4 and 6 years.

Size 4 requires 2¾ yards of 39-inch material with ⅝ yard of 35-inch contrasting.

Price of pattern 20 cents in stamps or coin (coin is preferred). Wrap coin carefully.

SOME PHOTOGRAPHERS ARE LUCKY

The press photographer who "shot" this picture admitted it was his lucky day, and we agree with him. A motorcyclist travelling down Newbridge Hill over the Rivert Dart, in Devonshire, suddenly stopped as the wheel of his sidecar went flying through the air, and the photographer released the shutter of his camera at the critical moment.

Figures Are Discouraging

Highway Accidents In Canada Increasing At Alarming Rate

Ontario drivers are not maintaining the safety record they set up during 1933. According to figures issued by the Motor Vehicles Branch of the Ontario Department of Highways, the number of reported accidents in February showed an eight per cent. increase over the same period last year, and it was during clear weather—under favorable conditions—that the increase occurred.

If there were any indication, anywhere, that the Canadian motorist was beginning to learn how to drive in safety, the figures on traffic fatalities would not be so discouraging. We could say, in that case, that the long list of deaths came simply because the motor car still was a relatively new bit of machinery, and that things would work themselves out, once everybody got the hang of it.

But we can't say that. Far from learning to handle our cars safely, we are making a worse record now than five years ago.

This can mean only one thing: that we are actually driving with less care to-day than we were five years ago. Far from learning to handle these new machines, we are getting worse. Fatalities are increasing at a discouraging rate.—Guelph Mercury.

Large Meat Consumption

Great Britain Has Highest Average And Italy Lowest

We cannot vouch for the figures that follow but they seem to come from a trustworthy source. Large slaughter-houses in this country number 1,600 besides innumerable small local killing places. Four footed animals killed for food number 120 millions, not including those butchered on farms and in small local butcheries. The average amount of meat eaten in the United States was 145 pounds in 1921, a decrease of about 20 pounds per person since 1900. Europe's average consumption is around 70 pounds per person. Great Britain's average the highest. Italy's the lowest; Japan's consumption is 1.5 pounds per person for a year and 25 pounds of fish. In large sections of the world practically no meat is eaten because of religious scruples.—Our Dumb Animals.

Beginning And End

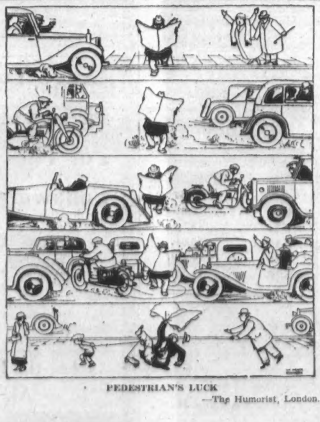
Famous Physician Gives Interesting Facts About Births And Deaths

The majority of babies enter this turbulent world at its quietest time, between two and five o'clock in the morning. Strangely enough, most people depart this life at the very hour when Napoleon insisted man needed the greatest courage—four o'clock in the morning. These conclusions are reached by a famous physician, Dr. Eduard Jenny, after prolonged study. Dr. Jenny discovered that the number of births increases rapidly towards midnight, riches a maximum between two and five in the morning and falls off to a minimum late in the afternoon. There is a difference of 40 per cent. between the number born around 5 p.m. (12,257) and 5 a.m. (17,244). A similar rhythm is found in the pulse rate, blood pressure, rate of breathing and other organic activities during the course of twenty-four hours. The death rate, too, follows a cycle. Although most deaths occur at the hour mentioned, Dr. Jenny deduced that invalids should fear the hours when day is changing into night, and the hours when night is changing into day. Dawn and dusk. The hours of death, however, are not so marked as the hours of birth.

Timothy Seed Production

Production In Canada Is Still Considerably Short Of Requirements

Domestic production of timothy seed in Canada is still far short of consumption, so that still further production of this crop may be encouraged. According to the Agricultural Situation bulletin, timothy ordinarily yields from 200 to 300 pounds of seed per acre, and growers have received on an average about 6½ cents per pound for the seed basis No. 1 grade, over the past three years. Canada uses annually about 10 million pounds of timothy seed and until 1931 some 9 million pounds of this was imported from the United States. Domestic production since 1931 has been greatly stimulated by educational activities and the prospect of a large domestic market. As a result, production increased from less than a million pounds to some five million pounds in 1932, but declined to about 2,700,000 pounds in 1933 due to unfavorable weather conditions.



PEDESTRIAN'S LUCK —The Humorist, London.

Britain Has Met New World Conditions With Less Violent Change Than Other Countries

Moscow Has Problem

Market Overstocked With Canned Corn People Refuse To Eat

Walrus steak, canned whale meat, Arctic hare and horse are recognized if infrequent entries on the Russian menu—but canned corn—never! Over that horribly staple of American diet the Soviet food-purveyors have made one of their most entertaining bad guesses.

Canned corn, excellent in quality and, to the American palate, a tasty change in a land where vegetables are few, arrived on the Moscow market some months ago. It's estimated there were some 2,800,000 tins of the novelty.

Now, with another spring just ahead the store keepers are faced with the critical question who's to eat the stuff, for the Russian populace has decided corn is a food for animals only, and though American residents have bought their fair share of the crop, the bulk of the cans remains unmovable on the shelves.

Recently there's been correspondence in the English language Moscow Daily News which summarizes the situation, and gives some reasons for it:

"The citizens of Moscow may have a prejudice against canned foods," suggests the writer. "Secondly, it seems that Russians think corn is not a food for men. Thirdly, the directions on Soviet canned corn call for milk, butter and other articles which are not any too plentiful at present.

"Soon another spring will come, summer pass and in the fall of this year one can picture another flood of canned corn let loose on the market. It will join the hundreds of thousands of cans remaining on the shelves, unless action is taken. Corn flakes will be on the market soon and they, too, will stare from the store windows and shiver from the cold reception they will receive."

And the writer suggests advertising—something not practiced in the Soviet Union—and perhaps an "eat-more-corn" campaign by the authorities.

U.S. Farmers Receive Aid

Huge Amount To Be Paid Out By End Of 1934

United States farmers, already enriched by nearly $200,000,000, will pocket $1,095,005,010 in benefit payments before the end of 1934.

An analysis of expenditures to be made by the farm administration during the present year in its wheat, corn-hog, corn, tobacco, and dairy reduction program indicates it has only begun to approach its spending stride.

Up to April 1 the administration had paid out $179,702,685 to farmers who agreed to reduce their cotton, wheat and tobacco acreage. Benefit payments to corn and hog farmers are just beginning to trickle out, the dairy program is in its formative stages, tobacco farmers have received only a portion of the money coming to them, and the second payment to wheat farmers is yet to be made.

May Bar Slot Machines

Egyptian Government Says Permits Will Not Be Renewed

Coin-operated games as well as certain types of vending machines may be prohibited in Egypt. The minister of the interior has notified the owners of the machines in question that permits for their use will not be renewed. A long campaign against gambling machines has been carried on by various elements in Egypt, including influential newspapers. The great majority of all the games are of American manufacture.

Would Remain Canadians

A resolution urging that Canadian women married to foreigners and continuing to reside in Canada be allowed to retain their nationality was passed at a meeting of the Canadian Alliance for Women's Vote in Quebec, under the presidency of Miss Idola Saint Jean. The resolution was forwarded to Premier R. B. Bennett.

Automatic machines are causing a saving of over $100,000 a year in the savings bank department of the British post office.

Three British doctors recently succeeded in isolating the virus of influenza.

Walter Elliot, the British Minister of Agriculture, in his recent broadcast, which wound up the "Whither Britain" series, made some profoundly interesting observations which have application to Canada as well as to Great Britain. He described agriculture as still the greatest industry in Great Britain and being in danger of dying from a surfeit of liberty. "Any man is free to grow anything he liked here under any conditions, and any man is free to grow anything he liked anywhere abroad and send it here equally without any conditions." And he pointed out: "The liberty to grow anything and the liberty to buy everywhere are clearly not working out satisfactorily in practice." This has led to the voluntary discipline of British agriculturists, who have accepted the boards set up under the Marketing Acts. Mr. Elliot has acknowledged frankly that his method is one of trial and error, but it is already meeting with some success, and he claims that Great Britain has met the new world situation with less violent change than any other country. He faces and accepts the world move towards economic nationalism, and believes that "the Western countries will have to solve in future far more of their own problems at home than they have done in the last 100 years."

Mr. Elliot uttered a profound truth which applies to Canada as much as it does to Great Britain, when he observed: "Statistics every day make national units more self-contained instead of less self-contained, and make it only not less advisable but less possible for this country—or for any country—to obtain prosperity by putting all that it makes on wheels and running it off to the end of the earth." It is surely obvious that the present movement towards what is called economic nationalism can hardly be arrested, and it must become increasingly difficult for Western countries to preserve their present standard living. But the nations of the British Empire, if they co-operate fully and wisely, have the soundest prospects of individual prosperity. As Mr. Elliot observed: "It is not so much a matter of government as of leadership."—From Canada, London, Eng.

Egg Grading Regulations

Revision In Effect For Most Of The Provinces Of Canada

The revised egg regulations are now legally in effect for domestic trading in all the provinces of Canada with the exception of Prince Edward Island and New Brunswick; and, according to general reports, the new standards are being found much more satisfactory than the old ones. One point which shippers should bear in mind, says the Department of Agriculture Egg and Market Poultry Review, is that all eggs in the different weights of grade A must be required to be "clean." Clean means free from spot or stain. There has been some tendency to place "reasonably clean" eggs in this grade, on the assumption that grade A medium replaces the old grade of Firsts. The requirements for cleanliness in grade A medium and grade A pullet are precisely the same as in grade A large. "Reasonably clean" eggs, in the past, went into the grade of Firsts, now go into grade B. Cracked eggs are required to be packed separately and marked "Cracks."

Queer Chinese Custom

Young Wife Sues For Divorce From Dead Husband

Married last year to a dead man, an attractive young woman of Canton, aged 20, daughter of a family which observes all ancient customs, Chu Tse-Ching is suing for formal divorce from her "ghost" husband. Specific grounds alleged for divorce is cruelty by the mother of the dead spouse.

Chu Tse-Ching never saw the man to whom she was legally married. They were betrothed by their parents when they were children and the man died about a month before the date set for the wedding. Parents of the man insisted upon the marriage ceremony being carried out "to solace the spirit of the dead."

THURSDAY, MAY 17th, 1934

Some youngsters— and some older ones too— have formed the very bad habit of passing personal remarks about girls on the softball field. This is not very nice and should be stopped.

The Calgary Albertan has discontinued publication as a morning paper and will, in future publish in the evening As amorning paper the Albertan will be greatly missed in this part of the province as it was the only morning edition in the west that could be of any service to this district. The Review joins in wishing the Albertan success in its new venture

With the fine Alberta weather now with us to stay for several months, it is only natural to expect a great increase in the car traffic on our public highways. This, in turn, naturally means a proportional increased risk of accidents, unless increased precaution is taken by both pedestrians and car drivers. A few seconds thought, a little extra precaution and not trying to see how fast she really can go, will prevent a lot of accidents.

According to reports, grasshoppers are hatching out considerably earlier than last year Since this is the case there should be no delay in preparing to get after them in good time so that the best possible results would be obtained. Last year considerable unnecessary damage was done, and great headway made by the grasshoppers. Because the proper action was not taken in time. In this connection many farmers were themselves to blame as they neglected to get busy until it was too late.

In another column of this issue a notice appears drawing attention to the meeting of the local Horticultural Association to be held next Monday. The object of this new oganization is to encourage the improvement of local surroundings and the planting of trees, shrubs, and flowers. Officials also have in mind beautifying of the local cemetery and the town park. It is the intention to procure trees and shrubs for distribution among the members, and to hold an exhibition of flowers, vegetables, etc., this fall, for which prizes will be offered.

As the success or failure of this movement depends largely upon the attendance shown at this meeting next Monday, the Review would strongly urge all who are in sympathy with it to be on hand.

The Martin family went for a charabanc trip to a famous cave of echoes. When they returned Mr. Martin discovered that his wife was not on the charabanc and he became alarmed.

"Do you know where your mother's got to?" he asked one of his daughters.

"Oh," said the girl off-handedly, "I expect she's still in the cave trying to have the last word."

Big Trade Increase

Gratifying Increase Is Marked In Recent Months

The total trade of Canada during the fiscal year 1933-34 which ended March 31, aggregated $1,019,455,000 compared with $887,097,000 in the fiscal year 1932-33, the department of trade and commerce announced recently. This was an increase of $132,358,000 or almost 15 per cent.

The value of the export of gold bullion is not included in the statement and it is probable when the increased export price of gold during the past year compared with the mint par value of $20.67 of previous years is added, the total trade of the Dominion for 1933-34 will also exceed the aggregate of $1,166,100,000 in 1931-32.

"This gratifying increase in the trade of Canada has been very marked in recent months," said the Hon. H. Brown, minister of trade and commerce, in commenting upon the statement. "It will be remembered that in April, May and June last, the first three months of the present fiscal year, trade was considerably below that of the same period a year ago.

"In April it was down 29 per cent., May eight per cent. and in June three per cent. Exports were down 26 per cent. in April but had made increases in May and June. Imports continued to decline until August. In March our exports were up 57 per cent. and our imports 44 per cent., the aggregate trade for the month increasing by exactly 51 per cent., a truly remarkable showing."

A Colossal Building

Palace Of Soviets Supposed To Express Aspirations Of Russian People

Some interesting details of the projected Palace of the Soviets, soon to be erected in Moscow, are contained in the current issue of the Economic Review of the Soviet Union, New York. This new structure will dwarf all existing buildings in the world.

The Palace of the Soviets will rise to a height of about 1,360 feet. At present the world's highest manmade structure is the Empire State building in New York, which is 1,248 feet high. It will be surmounted by a colossal statue of Lenin, 180 feet tall. The Palace of the Soviets is designed as a single structure, consisting of two basis elements: a large building 30,000, and a similar hall seating 6,000. The large hall will be 900 feet high and will be covered by a dome of such dimensions that persons sitting within the hall will have the feeling of being in the open.

Architectural drawings show the building to be of imposing proportions and yet there is something odd about the structure. The gigantic figure of Lenin does not seem to fit into the scheme very gracefully. But the palace is supposed to express the aspirations of the Russian people, and this it does quite well in its Russian way. Certainly Lenin is looked upon as something more than a national hero, and the statue for that reason is in an appropriate place.—Ottawa Journal.

Not Welcome In Alberta

Alberta Has Been Waging War Against Crows And Magpies

Ill-omened birds—crows and magpies—get no welcome in northern Alberta. Destroyers of bird life, taking heavy toll of grouse, partridge and pheasant eggs, the crows and magpies are "on the spot."

For ten years the Edmonton and Northern Alberta Game and Fish Protective League has waged war, aided by the Alberta department of agriculture. During the decade, 1,404,717 crow and magpie eggs have been destroyed and 442,449 crows and magpies killed. The provincial government pays a bounty on both eggs and birds.

Hen Has Nest In Tree

James Duncan, farmer near Sarnia, Ont., has a hen that flies like a bird and lays its eggs daily in an abandoned bird's nest in a tall pine tree. The hen is a Barred Rock. Mr. Duncan made the discovery when an egg the hen laid missed the nest and fell, nearly striking the farmer as he passed under the tree.

During the summer of 1933, temperature of over 100 degrees were reported every month in every American State except a few in the east.

The total area of Nova Scotia is approximately 21,500 square miles. Cape Breton comprises about one-seventh of this area.

AUTOS, TRAINS, EVEN HATS GO STREAMLINE

(Right)—While not completely streamlined, in accord with the mere advanced engineering, the new Austro-Daimler car, recently tried out on the Long Island Railroad, made speeds of around 60 miles an hour. Travelling almost twice as fast as the conventional type trains, this car has a much lower operation cost per passenger.

This car illustrates one of the first definite breaks with the old horse-and-carriage tradition in design.

Professional model showing the new winter, 1934 streamlined hat, along with the short nosed car with sweeping tail which inspired the hat designer. The hat is said not to blow off in a wind of 60 miles an hour.

Design for a sedan representing a complete streamlined revolution. The chassis is re-engineered from the ground up. Notice from the window spacing that passengers no longer sit over the rear wheels—important improvement in riding comfort. The blunt nose is another advance in streamline design.

Engineers are now declaring that every train and automobile of any design familiar to the public is obsolete. Aviation, which has been unhindered by designing conventions because it was developed only in the last 35 years, has benefited by the new engineering progress most rapidly.

But trains and automobiles also are now beginning to show the influence of the laboratory. Experts now freely predict that the automobile especially is due for swift, radical change and development.

Streamlining of autos, already begun, will continue until the long radiators will disappear; short blunt noses will in the future be the symbol of the new car's power and speed; the front will be broad and the whole car will taper to the rear somewhat like an inverted cone. Such a shape travels through the air with least resistance. A complete weight redistribution in the car will then be possible, resulting—say experts—in a riding comfort previously unknown. Notice that in the new car model held by the girl that back seat passengers sit in front of the rear wheels—not on top of them. Such rebalancing of the automobile promises a completely new riding experience.

Fur Farming In Canada

Dominion Government Issues A Report On This Subject

The importance of fur farming in Canada is indicated by a report on that subject which has just been issued by the Canadian government. From the earliest days Canada has been an important source of furs; the early history of the country is closely linked with the history of the fur trade. The raising of wild animals in captivity for their furs is, however, of comparatively recent origin. The earliest authentic record of the successful breeding of the fox in captivity was in Prince Edward Island in 1878. After 1890 came a period of rising prices for furs and the fur farming industry grew rapidly in Prince Edward Island, and the industry spread also to other provinces. Interest also developed in the raising of other kinds of animals for their fur.

The latest statistics show that there are 5,221 fox farms in Canada, on which are a total of 99,109 foxes, of which 72,703 are silver foxes. Fox farming is now carried on in all provinces of the Dominion, and the number of farms has steadily increased. Other varieties of animals which are being successfully raised include mink, raccoon, skunk, marten, fisher, and coyote. There are now 645 mink farms. This animal is easily domesticated and thrives in captivity if proper care is taken. Numerous areas of marsh land are now being used for the raising of muskrats. The value of pelts sold from the fur farms of Canada during 1932 amounted to over three million dollars.

Would Suit Some Students

Geography Once Considered Unsafe Subject For English Schools

Geography was considered an "unsafe" subject to teach in public school in 1879. Miss J. Phillips, president of the London Teachers' Association, in her presidential address at the annual conference, caused laughter by quoting from evidence given before a Select Committee of the House of Commons regarding "extravagant" school expenses in that year. "Geography, sir, is ruinous in its effects on the lower classes," a witness said.

"Reading, writing and arithmetic are comparatively safe, but geography invariably leads to revolution. Physiology, besides being costly and useless, is an immodest subject. When the Author of the Universe hid the liver of man out of sight He did not want frail human creatures to see how He had done it. Grammar is an enervating exercise."

Portable X-ray equipment is found useful in detecting the cause of lameness in valuable horses.

Historical Moments

Letter Dealing With 1885 Rebellion In The West Written by Sir John A. Macdonald

A letter written by Sir John A. Macdonald in 1885 and hitherto unpublished has been placed with Queen's University officials by County Judge H. A. Lavell, of Kingston. The letter deals with Louis Riel, hanged for his part in the uprising in Western Canada at that period.

Sir John wrote the letter to Dr. Michael Lavell, the judge's father. Riel, at the time, was under sentence of death, and his followers had claimed sufficient importance had not been placed on the defence's plea at his trial that the prisoner was mentally irresponsible. The government took precaution to counteract these pleas.

The letter mentions Dr. Lavell's trip to Regina in 1885, which, Sir John stated, "should be kept a profound secret" until the doctor completed a report of his mission. "You must have some business in New York or elsewhere so as to throw people off the scent," the letter said.

British Columbia Leads

The Brockville Recorder and Times says: "We in Ontario think that we are very well supplied with telephones and yet statistics prepared by the Bell Telephone Company actually show that in the number of telephones to 100 population this province must take second place in the Dominion with leadership going to British Columbia. There were last year 15.2 telephones in Ontario to every 100 people living in the province, but British Columbia's total for the same number of people was 16.2."

System In Hog Marking

Marking Demonstrated To Be Both Feasible And Practical

While it is not expected or recommended that all market hogs should be marked, because efficient local grading eliminates the necessity of maintaining local identity, at the same time the marking of hogs has been demonstrated to be both feasible and practical where local grading is not practicable. Experience in the marking of hogs as carried out by Canadian shippers and drovers has made possible the study of the various systems with a view to making a selection of the best system for general use throughout the Dominion. Such a system has been outlined in the Dominion Department of Agriculture pamphlet No. 88, in which is shown the application of different marks on the backs of hogs at different location by means of clipping the hair with scissors or clippers. On short-haired hogs where such marks are not distinct enough, it is advised to add a mark with roofing paint which dries quickly.

Hold Butter Festivals

In the Tibetan principality of Choni, China, butter festivals are held annually. Monk artists mold great butter images for the occasion; yak butter, highly colored, is the medium used, and all work must be done at low temperatures.

A cigarette lighter containing a tiny roulette wheel has appeared in London.

Window curtains should soften the light, not shut it out.

Followed Best System

Lethbridge Does Without Things They Cannot Pay For

Here in Lethbridge we have had an example of Scottish thrift.

There are plenty of things which as a community we need, and would like to have—paved streets, a better city hall, finer parks and playgrounds, to mention a few. We might have gone on borrowing more and more money to pay for the things we wanted. We didn't. We get along without. We tried to pay our way as we went, at the same time laying by money to pay off the existing debenture debt.

By 1943, we are told more than 80 per cent. of the city's debt will have been wiped out. Interest and sinking fund charges which to-day take about half the levy for city purposes will by 1943 have been almost wiped out.

Will Lethbridge pay as it goes thereafter? Will it pave its streets out of current taxes, build up its buildings out of money saved up for that purpose?

Lethbridge and a lot of the towns and school districts in Southern Alberta are rapidly cleaning off their indebtedness incurred during the boom times. Let's think this matter over very carefully and see whether we cannot in future get along by paying as we go, incurring no future debt except in case of absolute emergency.

And we can well afford to give thought to whether we cannot do the same thing in our farming operations and in all our business dealings.

The way to save billions is to pay as you go.—Lethbridge Herald.

Weighs Nearly Quarter Ton

Bermuda Has Second Largest Green Turtle In Captivity

Florence, weighing 422 pounds and claiming to be the second largest green turtle in captivity, showed considerable pleasure on being introduced to several of her species at the fine government aquarium in Bermuda after having spent four days in lonesome solitude aboard the Canadian National liner Lady Drake.

She was provided with free transportation from Antigua, but this did not include meals. She was placed on a starvation diet till her arrival at Bermuda, many passengers aboard the liner being much concerned on this account.

The largest turtle in captivity presented recently to the London "Zoo", in Regent's Park, was also reared in waters surrounding Antigua, one of the most northerly and capital of the Leeward Islands. She is only 26 pounds heavier than Florence, and said to be about the same age. Florence hundred years, their birth coinciding closely with the death of Nelson.

Word "Sterling" On Silver

Guarantee That Metal Used In Piece Is Genuine

The word "sterling" on silver means solid silver of a definite fineness. Pure silver is too soft for use, but by adding seven and one half per cent. of copper a substantial and enduring sterling metal is made. These proportions were used long before 1350 and have never been changed. "Sterling" on a piece is restricted by law to silver which is 925-1000 pure; and it is a guarantee that metal used in the piece is genuine.

Sterling is an ancient word. It is a contraction of "Easterling". In the twelfth century there flourished in Germany the Hanseatic League comprising certain free towns. These towns issued their own money. The British soon learned that money from these Hanse towns was always the same, always dependable. Soon they came to insist on the coins of the Easterlings, or those from the east of Britain. Later "sterling" was made the standard both for English money and for the manufacture of solid silver.

Method Not Fairly Tried

The League method has had no fair trial. It has been, for fourteen years, confused and mingled with the older method. Within the "framework of the League" statesmen have played the old game of checks and balances; they have built, or sought to build, alliances or ententes against this or that prospective enemy.—London Daily Herald.

Not What He Meant

Jones was presenting a purse and watch to a fellow workman who was leaving the concern. After a long, flattering speech, the manager wound up with:

"The contents of this"—holding up the purse—"may in time disappear, but"—holding up the watch—"here is something that will never go."

Relic Is Valuable

Manitoba Church Has Altar Cloth From Ypres Cathedral

The original cloth that once graced the altar of Ypres cathedral is now included in the sacred furnishings of St. Charles Catholic church in Manitoba. This historic tapestry covered the church altar there during Easter services.

Secured from a German prisoner of war, it was taken to England by a non-commissioned officer, who not recognizing its value, pawned it for five pounds sterling. Later it was redeemed and came into the possession of Frank Birch Massey, then a resident of Runcorn, Cheshire.

Mr. Massey emigrated to Canada after the war years and, in the flurry of preparation, the prized tapestry which had been packed away for a safe return to cathedral authorities, was forgotten. Years later, in the belief it would have been replaced with vestments of the church, it was decided to offer the cloth to the St. Charles church.

Strange as it may appear, Mr. Massey said, the facts in regard to the history of this unique appanage, are probably not even known to the church authorities. "The priest to whom we communicated our decision had little knowledge of English. Mrs. Massey and myself had difficulty in explaining its history. The priest displayed little enthusiasm in receiving the gift, apparently lacking appreciation of its value."

Description, of the relic is as follows: Black cloth, length 15 feet by four feet in width, with silver tassels four inches deep as a border.

A Floating Hotel

Steamer Princess Victoria In New Role at Pacific Coast

Thirty years ago residents of Vancouver and Victoria were thrilled by the appearance of a trim steamer which was to win the blue ribbon of British Columbia and might found.

She was the Princess Victoria.

This summer the former pride of the fleet is to become a "hotel" tied up at Newcastle Island. Her staterooms are to be rented to holiday-makers, who will also have the privilege of using the spotless galley.

Built at Newcastle-on-Tyne in 1903 by Swan and Hunter, the Princess Victoria reached Her coast the following year after a voyage through Magellan Straits. Her staterooms were fitted up at Victoria and there was much speculation as to her speed.

Her first voyage on the Vancouver, Victoria, Seattle service was a gala affair. The ship soon proved that nothing in these waters could touch her. She set new records for the runs between port and port and became a topic of pride with seafarers both sides of the boundary. She is 300 feet long, 40 feet 6 inches beam and draws 15 feet 4 inches. Her engines developed 484 horsepower.

She always kept a high turn of speed, although more modern rivals appeared on the scene.

When the first Eskimo built the igloo he little dreamed that he was making a model of a 1934 motor car.

World's Population Survey

Predict London Will Be Sixth Largest City By 1944

The French Academy of Sciences publishes Professor Charles Richet's world population survey predicting that by 1944 London will be the sixth largest city in the world, with New York first, Tokio second and Shanghai third, following the rapid expansion of the yellow race and the gradual reduction of the birth rate of white races.

Prof. Richet's survey indicates that in the next ten years the world's population will have increased 195,000,000. The Asiatics will have increased their races by 140 million souls; the American nations by 35 millions and the European countries by only 20 millions.

He draws three conclusions:

1. Yellow and mixed races increase in rate five or six times more rapidly than the white races.

2. Among the white races, the Europeans increase the least.

3. Among the European peoples, the most civilized nations show the least population increase.

The Yugoslavs show the greatest rate of increase among the European nations, 35 per thousand; the Swedes the least, 14.8; other continental nations show the following rates: Rumania 33.4; Bulgaria 31.3; Portugal 30.4; Poland 30.3; Spain 28.3; Italy 24.9; Hungary 23.2; France 17.4; Norway 16.8; Switzerland 16.8; Great Britain 16.6; Germany 16.9; Austria 15.8.

"Blue" Spells

Reduce some women to the petulant shadow of their own smiling selves. Others take the Vegetable Compound when they feel the "blues" coming on. It steadies quivering nerves . . . helps to tone up the general health . . . gives them more pep . . . more charm.

Some Idiotic Contests

Craze For Needle Threading Is Most Foolish One Yet

We are told by the ladies who write pieces for the paper that the needle-threading craze has reached Vancouver.

This entertaining form of folly consists of an open competition in which the contestants vie with each other in seeing which one can jam the most threads through the eye of a needle.

We have had successively dance marathons, rocking chair marathons, hog-calling contests, rolling pin heaving matches, flagpole sitting, piano-playing marathons and even liars' contests.

But we respectfully submit that this frenzy for threading needles is the most asinine one of the lot.

Idiotic contests seem to be in our blood. We just can't shake them off.

So let's establish another one.

Instead of competing with each other to see who can dance longest or call a hog the loudest, why not compete to see who can devise the nuttiest kind of a contest to keep the other nuts busy?—Vancouver Sun.

Perils Of Seafarer

Deaths through violence are 430 per cent. higher among sailors than in other groups, M. J. Jacobs informs us, states the Los Angeles Times. He also gives us the startling statement that going to sea in modern ships is no safer than in the days of the Phoenicians, 2,000 years ago, when crude wooden skiffs were used.

IT'S LIVER THAT MAKES YOU FEEL SO WRETCHED

Wake up your Liver Bile

—No Calomel necessary

For you to feel healthy and happy, your liver must pour two pounds of liquid bile into your bowels, every day. Without that bile, trouble starts. Poor digestion. Slow elimination. You feel sour, sunk, constipated, headachy.

Here can you expect to clear up a situation like this completely with mere bowel-moving salts, oil, mineral water, laxative candy or chewing gum, or roughage? They don't wake up your liver.

You need Carter's Little Liver Pills. Purely vegetable, thats. Quick and sure results. Ask for them by name. Refuse substitutes. 25c, at all druggists. 84

Precious Glass Of Water

University Of Michigan Values It At Ten Thousand Dollars

The most precious glassful of water in the world—$10,000 worth—is under lock and key in the University of Michigan laboratories, guarded as jealously as radium.

It is "heavy water" in its pure state deuterium oxide, discovered only two years ago and valuable in the treatment of cancer. Profs. J. C. Halford, Leigh C. Anderson and John R. Bates have worked out a plan to increase the university's valuable supply to two quarts within two years.

A report on the process was given at the meeting of the American Chemical Society in St. Petersburg, Fla. Prof. Halford hopes that the water may some day prove valuable in curing the ailments of old age.

Revenue From Smokers

Millions Paid To Government In Taxes On Tobacco

Consumption of Canadian cigarettes increased during the past fiscal year compared with the year before. The total entered for consumption for the first 11 months of the past year was 4,017,674,385, according to a return tabled in the House of Commons. For the entire fiscal year 1932-33 the total was 3,728,832,089.

Smokers in Canada altogether paid into the revenues of the Dominion during the 11 months of the past year $24,524,362 as imposts on tobacco in its various forms, with the duties on cigarettes supplying about two-thirds of this total.

SPRINGTIME PRINT — AND A PRECIOUS MODEL THAT ADAPTS ITSELF SO PERFECTLY FOR ALL-DAY WEAR

It is another little dress that you can slip into in the morning and wear right through an entire day.

You will see here are very modish sleeves cuffed in a most attractive manner. The neck is becomingly draped. And the skirt panels at the front to give you a tall gracious appearance.

Later for frankly hot summer wear, you can make it with short sleeves as in wee sketch. There are numberless fresh washing silks for your choice, handkerchief linen prints and lovely cotton prints.

Style No. 696 is designed in sizes 14, 16, 18 years, 36, 38 and 40 inches bust. Size 16 requires 3¼ yards of 39-inch material.

Price of pattern 20 cents in stamps or coin (coin is preferred). Wrap coin carefully.

CYCLING TRAVELER

You can have your autos and planes. Ian Ross MacFarlane, of Washington, is sure he can get about quite as well on a bicycle. He is shown at New York after arriving on the liner Champlain following five years travel abroad. He toured Europe and Asia on his bicycle, winning the distinction of being the first to cross the Syrian desert in that manner.

Little Journeys In Science

OXYGEN

(By Gordon H. Guest, M.A.)

It has been known for centuries that the air contains at least two components—an active and an inactive one. More than a thousand years ago the Chinese called the active part yin (oxygen). They discovered that this active gas combined with sulphur, with charcoal, and with some of the metals. The inactive part is nitrogen.

Experiments show that approximately one-fifth of the air is made up of this active gas known as oxygen. This element not only occurs in the air but is found most abundantly combined with other substances. It comprises nearly 50% of the earth's crust, about 89% of water, 65% of the human body, and a very large part of such substances as saltpetre, limestone, brick and mortar.

Oxygen is a gas without color, taste or odor. It is a little heavier than air and would be unsuitable for filling zeppelins. It is very slightly soluble in water, 100 cubic feet of water dissolving only about 4 cubic feet of the gas under ordinary conditions. There is, however, enough of the gas dissolved in water to supply the needs of fish, which are cold-blooded.

This gas does not burn itself, but it supports burning or combustion. It combines with a large number of other elements. This tendency is not very great at ordinary temperatures, but at higher temperatures oxygen reacts very vigorously, usually giving off heat and light. The substances produced when elements combine with oxygen are known as oxides and the process is called oxidation. Many oxides occur in nature as valuable minerals and ores.

Oxygen is not only the most abundant element but the most useful, because life, heat and light are largely dependent upon it. Considerable quantities of oxygen are used for cutting and welding metals by the oxy-acetylene blow torch. Oxygen in tanks is used to restore the supply in the air of submarine boats. It has been found that aviators who ascend to high altitudes, where the air is rarefied, get only half the usual amount of oxygen and so become "dopey". An equipment has been designed to supply the oxygen from a tank through a connecting tube to a face mask covering the mouth and nose.

Physicians sometimes use oxygen tanks for patients who are suffering from pneumonia or suffocation.

Gardening

Early Planting Usually Ensures An Early Harvest

Now that May has arrived it should be fairly safe to try a few rows of those vegetables which are not usually sown until later. If frost does come along, there is a small loss, as the ground can be used over again, whereas if the stuff pulls through there is the satisfaction of having from one's own garden, vegetables unusually early. Beans, potatoes, corn, tomatoes and a few of the other tender and semi-tender vegetables can be treated in this way. With hardy sorts like spinach, radish and lettuce, one can make the first sowings just as soon as the ground is fit to work. Frost may hold them back but it will not hurt them. Handle the end of the planting season in the same way, that is make a sowing or two after the usual time for planting, so that there will be stuff coming along weeks after the main crop has been picked.

Some people desire to include some fruit with the garden. In the prairie provinces or Northern Quebec or Ontario, there are some new hardy types as well as good crabapples available. Among sweet cherries, Windsor, Bing and Tartarian are recommended, while Montmorency and Early Richmond are standards of the other type. Plums are grown almost anywhere in Canada, as well as currants, raspberries, strawberries, blackcaps, thimble berries, logan berries, and gooseberries.

There are few gardens, indeed, where one cannot work in screening material to advantage. Even if there are not dog kennels, chicken runs and telephone poles to be hidden, the general lay-out is improved where all is not visible from one point. Of course permanent screens are only produced by the use of perennials, such as evergreens, shrubs and long-lived climbers. But quite satisfactory results can also be secured by selecting the right type of annuals. For instance, African Marigolds, Cosmos, Ornamental Sunflowers, Larkspurs, Castor Beans, and other bushy, fairly tall plants will make satisfactory screens by early July. Among the climbers of an annual nature there are Morning Glories, Nasturtiums, Sweet Peas, Hops, and Scarlet Runner Beans.

The old gardener was right in planting peas early. Like the flowering kind it does not seem as if the garden variety can be put in too early. Invariably the biggest crops are produced by the early sown rows. On this account it is best to plant all the peas about the same time, and that is just as soon as the soil is fit to work. To be on the safe side, in those parts of the Dominion where late and very heavy frosts are liable to occur it might be well to put half the peas in on the first possible sowing date and the remainder about 10 days later. Where the climate is mild and the growing seasons goes into late September sometimes a fall crop can be harvested from July to August sowing. To ensure a long harvesting period, and with a vegetable like this the season cannot be too extended, it is advisable to sow early, medium and late varieties. The first sorts are ready in about 50 days while some of the later ones do not start coming on until a fortnight later. The taller, large podded sorts are generally considered the sweetest and best, but they take up more room. For best results they should be provided with brush or strings for support or can be sown broadcast. Peas, like corn, have a flavor all their own when cooked with an hour of picking.

"Is that painting intended to be a picture of a sunset or a sunrise?"

"It must be a sunset. I knew the artist, and he never got up in time to see a sunrise."

The man who has to say "I am a gentleman," isn't.

Puffins shed the outer covering of their bills every fall.

Carbon Black Plant

First Plant Of Its Kind In Canada To Be Established In Alberta

The first carbon black plant in Canada, on the farm of C. R. Ecklin, nine miles north of Craigmyle, 122 miles east of Calgary, is expected to be on a production basis by July.

Several weeks ago Mr. Ecklin received a special government permit to produce carbon black.

The plant is being built by a firm to be known as the Pioneer Carbon Black Co. Ltd., at an estimated cost of $20,000. In addition, more than a dozen wells will be drilled on the Craigmyle farm.

Drilling a water well 15 years ago, Mr. Ecklin struck a flow of about 30,000 cubic feet of dry gas at the 450-foot level. Ever since he has had an abundant supply of gas for use on his farm. In 1923 he drilled two more wells to the same level, and obtained flows of approximately 100,000 cubic feet a day from each.

During the past 12 months, Mr. Ecklin has produced with an inadequate plant of his own a total of about 350 pounds of carbon black which he has disposed of to a paint firm in Calgary. The product has a market value of 11 cents a pound. At present carbon black used in Canada is imported from the United States.

Will Fly Small Machine

Girl To Pilot Last Word In Speed Planes

When Henrietta Lantz competes in air races throughout the country this summer she will be flying what is perhaps the last word in speed aeroplanes.

A tiny ship 15 feet long and with the same wingspread is being constructed at Los Angeles for her. It is expected to have a maximum speed of between 280 and 290 miles an hour, powered with a Menasco six-cylinder motor.

The aeroplane to be christened Henrietta's Buzza-Jaquiss, will cost close to $17,000. It will follow in design the French hydroplane which recently set a world's record of 465 miles an hour.

Two years ago Miss Lantz won the Los Angeles-Cleveland women's air derby, and has been a consistent race winner at Chicago, Los Angeles and Cleveland. She claims never to have had an accident.

Dr. W. A. Jaquiss, Hollywood veterinarian, and George Buzza, art publisher, are financing her venture.

She plans to take the aeroplane to New York shortly after June 1, when it has completed its tests.

Recipes For This Week

(By Betty Barclay)

CARAMEL BON BONS

½ can sweetened condensed milk which has been caramelized
3 cups confectioner's (very fine ground) sugar
1 teaspoon vanilla
1 cup toasted cocoanut or chopped nut meats

To caramelize, place a can of sweetened condensed milk in a kettle of boiling water and keep at boiling point for three hours. Be sure the can is kept covered with water. You can prepare several cans at a time and open them from week to week as desired. Open up the can of caramelized sweetened condensed milk and blend the contents with sifted confectioners' sugar. Add vanilla. Drop by teaspoonfuls onto toasted cocoanut or chopped nut meats. Form into patties or balls. Chill in the refrigerator.

POTATOES, PEAS AND CARROTS

To two cups of mashed potato add one-quarter cup heavy cream, 1 teaspoon onion juice, 1 beaten egg yolk, 1 teaspoon sugar, salt and pepper to taste. Beat until light. Form a ring of this on a shallow buttered baking dish. Fill centre with cooked peas and carrots seasoned with sugar, salt and pepper. Dot potatoes with butter. Bake just long enough to heat thoroughly and lightly brown potato.

Banns Instead Of License

"Depression Practice" Cost Alberta $9,000 Last Year

Hamilton (Ont.) is not alone in its loss from marriage license revenue. The same condition exists in Alberta, and it cost the province $9,000 in 1933 because young couples had their marriage banns announced in church rather than pay the $6 license fee.

"All denominations are doing it now," said Donald Mackie, provincial statistics registrar. Hamilton city reported revenue loss of $1,000 because of the "depression practice."

"Roll your Owners" from coast to coast will tell you that Ogden's Fine Cut is the star turn on the smoke enjoyment program.

Ogden's Fine Cut gives them what they want, tunes them in on finer flavour, finer fragrance, cooler smoking and easier rolling.

"C.B.C." (Canada's Better Cigarette) Tobacco — that's Ogden's Fine Cut. Try it — with "Chantecler" or "Vogue" papers. You'll never find a more satisfying combination for "rolling your own."

OGDEN'S FINE CUT

P.S.—At any Poker Hand Premium Store or by mail—you can get 5 large booklets of "Chantecler" or "Vogue" cigarette papers in exchange for one complete set of Poker Hands.

Heavy Tourist Trade

Estimated Americans Spend $77,250,000 In Canada In One Year

Travel between the United States and Canada is greater than over any other international boundary in the world, according to a return just issued by the Canadian government dealing with the tourist traffic of Canada. During 1933 the number of automobiles from the United States which entered Canada for touring purposes was 3,090,887. Of these, 2,233,418 were admitted for a period not exceeding 24 hours; 363,136 for a period not exceeding 60 days; and 333 for a period not exceeding six months. From information received from various sources including co-operation with United States officials it is estimated that the average expenditure per car in the 24-hour class was $7.68; in the 60-day class, $59.80; in the six-months class, $234.01. Total expenditures by visitors by automobile from the United States during the year are placed at $77,250,000 in Canada funds.

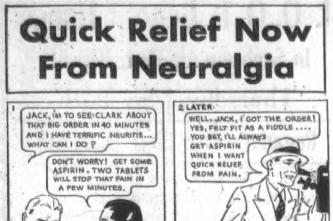
Quick Relief Now From Neuralgia



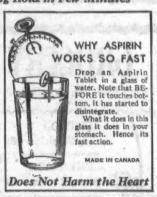
Real ASPIRIN *Starts Taking Hold in Few Minutes*

Now comes *amazingly quick* relief from headaches, rheumatism, neuritis, neuralgia . . . *the fastest way to relief, it is said, yet discovered.*

Those results are due to a scientific discovery by which an Aspirin Tablet begins to dissolve, or disintegrate, in the amazing space of two seconds after touching moisture. And hence to start "taking hold" of pain a few minutes after taking.

The illustration of the glass, here, tells the story. An Aspirin Tablet starts to disintegrate almost instantly you swallow it. *And thus is ready to go to work almost instantly.*

When you buy, though, be on guard against substitutes. To be sure you get ASPIRIN'S *quick relief*, be sure the name Bayer in the form of a cross is on every tablet of Aspirin.



Does Not Harm the Heart

OCCASIONAL WIFE

By

EDNA ROBB WEBSTER

Author of "Joretta", "Lipstick Girl" Etc.

SYNOPSIS

Camilla Hoyt and Peter Anson, young and in love, marry secretly, deciding to live their own lives apart until Peter is able to provide for her. Peter is a young, struggling sculptor trying to win a competition for a scholarship abroad and Camilla is the adopted daughter of a wealthy family. She is not to inherit money when she comes of age and so is studying commercial art in the hope of landing an agency job. Others in the story are Avis Werth, another wealthy girl who is trying to win Peter, Silvia Todd, Peter's model, and Gus Matson, his former roommate with whom he has quarrelled. At a party at an exclusive club Peter entertains Camilla's guests with impersonations. When the rest of the members of the party go to a cabaret to continue the gaiety, Peter and Camilla slip off to the beach by themselves and fall asleep on the sand. When they awake it is early morning and Avis and another boy are standing near them. This makes it necessary for Camilla to announce before the party that she and Peter are married. Bowman and Weeks, an advertising agency where Camilla has submitted some of her work, send for her and offer her a salary of $50.00 a week to start and a prospect of having it doubled. She tells Peter of her good fortune in securing employment. Mrs. Hoyt is also informed that Camilla has obtained work and is going to leave Hoyt household. Avis Werth rents a studio on the same floor as Peter, and invites him to have lunch there. He accepts reluctantly, but is favorably impressed with his visit. Camilla urges Peter to accept some of her earnings to help him along, but Peter refuses and they quarrel. After Camilla has gone from the studio, Avis Werth calls and persuades Peter to accept a loan of $1,000.

(Now Go On With The Story)

CHAPTER XLI.

Camilla told Rose then of the disagreement between Peter and herself. She found some relief from her confidence in a sympathetic listener.

Rose nodded soberly. "I expected it. You might have known it would not work out."

"But, Rose, if this way doesn't, what would? It seemed to be the best plan in every way."

"The best plan would have been to wait until Peter was established before you married," emphatically. "But that might be for years. And we love each other so!"

"Sure, that's just the trouble, no matter what class the man is in or whether it's a case of love or duty. The next best thing in your case would have been for you to let Peter take care of you and make the best of everything he could give you and anything he could do for you, even if you had to live on practically nothing but love."

"Oh, but that would have ruined Peter's career!"

"And what is your occasional wife plan doing for it?"

Camilla sighed and gestured helplessly. "I don't know. That's just it. Nothing is right."

Rose offered cheerfully, Oh, he will get over it and everything will be okay again until the next round. All husbands and wives have to quarrel about something once in awhile."

"Not the pure gold ones you were talking about. Rose, you didn't tell me what class Peter is in."

"You should know. Class three, of course. Peter is no man of habit—he's too clever. And if you ask me, I'd rather have a man who steps aside once in awhile because he has some brains and originality, than a man who is loyal because his wife is just like eating and sleeping, to him."

"You mean you wouldn't mind if he were untrue?"

"Oh, sure, I'd mind it. But what could I do about it? And who has everything just the way she wants it? I'm just saying that half a loaf is better than none and that if your man is in that first or second class, you have none. None of that romance and sentiment that women crave. That's why most of them have to get a substitute, like listening to radio crooners."

"But what shall I do about Peter?"

"Nothing. Just go to see him as usual and act as if nothing had happened. Men don't weigh and remember every word that's said like a woman does. They get over a quarrel as easily as they get into it But don't mention money to him again. Let him sell apples for a living, if he wants to be so stubborn and independent." She laughed. "In a way, I admire him. I'm sorry for him, too. Peter's a grand guy, but he needs a lift somewhere. If he don't take it from you, maybe he will from someone else."

"Who?" Camilla inquired anxiously.

"Oh, someone will recognize his talent, perhaps, and get around his pride complex. I hope so, for his own sake, and yours."

The shrilling of the doorbell startled both of them. They looked at each other inquiringly, for they seldom had visitors.

"It's probably Peter," Rose observed. "If it is, I'll get out, so you two can talk."

"Please don't I don't think it could be Peter, though." Already, her heart was racing at the thought.

"Well, you won't know until you open the door." She smiled to herself at Camilla, who sat as if glued to her chair and yet looking as if she wanted to fly to the door. "Just a second until I get this sewing out of sight."

Camilla patted her hair and powdered her nose hurriedly before she called into the speaking tube, "Hello."

"Camilla?" inquired a voice that caused an exquisite delight to vibrate through her whole being. "It's Peter."

As if she didn't know! Already, she had pressed the electric button to release the downstairs lock, and was outside in the hall waiting when he reached the top of the stairs. His long legs always scorned less than two or three steps at a time.

He took both her outstretched hands and kissed her eagerly, drawing her into the room. "Darling!"

"Peter, I'm so glad to see you!" she whispered.

He tossed his hat onto a table and looked around. "Hello, Rose. Am I intruding?"

"Not at all. I'm tickled to death you came. I wanted to go out home and see Ma tonight, but Camilla did not feel like going and I didn't want to leave her alone. Now I can run along."

"Why, you never said—" Camilla began.

"Of course not. I knew you would insist on staying alone. I'd rather not come back tonight, either. Can't you stay, Peter?"

"Why—if Camilla wants me."

"Well you two can settle that. I think I know what the answer will be," she said roguishly. "I won't be back, anyway. I'll take my slip out and sew the lace on the machine. That will be much better and save me a lot of time." She was collecting her things as she talked. She stood before the mirror and adjusted a red beret over her soft black hair, buttoned the collar of a tweed coat under her chin. "Chilly out, isn't it?" she asked Peter.

"Rather," he replied. "You don't mind going out alone?"

"I should say not! It's early yet. Well, goodbye, you two. See that you treat our guest right," she admonished Camilla with a sly wink.

"Nice kid," said Peter, when she had gone. "Too bad she hadn't a chance like you."

"I don't know. In many ways, Rose is wiser than I. I envy her sometimes."

"Camilla, I came to apologize for the other day. I'm terribly sorry," he confessed.

"So am I, Peter. But that's all over. Let's forget it ever happened." She was in his arms, with her arms around his neck, close.

"My precious! I wish it hadn't happened. But we'll start all over again, just as if it hadn't. Except please, dear, don't say any more about—that." Which is the way men apologize and repent, with no retractions or concessions. They may regret what has happened, but sometimes the woman is still wrong in their opinion.

But like all women in love, it was enough for Camilla that he once more held her close instead of drawing away from her, that his eyes looked deep into hers with confidence.

"It was I who had the blackieblues that time. I haven't felt so low as long as I can remember. But everything is going to work out all right, sweetheart." His optimism was a happy surprise to Camilla. Heretofore, it had been she who encouraged him. This mood must be the rebound from the depths of his recent despair. It was so delicious to relax in his arms and in the buoyancy of his mood.

"You just forgot that the load of thing you are doing can't be accomplished in a minute. And the best things in life always take time to accomplish."

"I don't mind waiting for a reasonable time, but I get panicky sometimes when I think about some of the old boys of the past who had to die before the world would recognize them. I may not be a genius in their class, but look at the fellows like Fanshaw. He died penniless and writing a play that has survived for two centuries."

"Tell me about him. I dont' know the story," Camilla prompted.

"His story fits plenty of others like him. But he wrote his masterpiece on his deathbed, when he knew he was doomed to die, and in extreme poverty. The play was a tremendous success from the first, but he lived for only a month after the premiere. Imagine the irony of that—audiences roaring at the humor of his play while he suffered the last agonies of a slow death. And the play is still a success—just revived in London last season and made such a big hit that they're bringing it to America. Such is fame!"

"But, darling, genius gets a better break these days than it did two centuries ago."

He nodded. "That's what ranked the struggle worth while, that, and hoping that even if I'm not recognized while I'm living, I might produce something that would add to the beauty of the future. Sculpture is more enduring, at least, than a book or a picture that can be hidden away or lost."

Had Camilla known what power sustained his hope and confidence, she might have been less happy in sharing it. But she supposed that Peter naturally buoyant nature had righted itself in his contrition over their quarrel, and that he had worked out his problem to satisfy his own peculiar pride. She did not know that he had dined that evening with Avis, and had brought away with him some of her faith in himself and her own ultimate victory.

She was to discover in the days which followed, that if you once put love away for even a little while, and then take it out again—it is never the same. It is like a flower that is so fragrant and beautiful that you want to keep it forever and put it away between the pages of a book to treasure with memories; but when you take it out again, it is not at all the same gorgeous thing that you once had in your hands.

(To Be Continued)

3 MONTHS ON BISCUITS AND MILK

Woman's Digestive Troubles

Everyone who is subject to any form of indigestion should know of this woman's experiences. Advice from one who has had such severe attacks is advice worth having. She writes:

"I suffered from indigestion, gastritis and constipation, and was so very ill, I had (on medical advice) to live on soda biscuits and milk for three months. Well, a friend advised me to take Kruschen, and now I am pleased to say my troubles are ended. I can eat and enjoy a good meal without any painful after-effects, my skin is clearer—in fact, quite clear—and there is no sign of constipation. I would advise anyone suffering the same to take Kruschen."—(Mrs.) M. H. L.

The immediate effect of the six salts in Kruschen is to promote a natural flow of the digestive and other vital juices of the body. Soon after you start on Kruschen you will find that you are able to enjoy your food without any distressing after-effects. And as you persevere with the "little daily dose," you will see that the relief which Kruschen brings is lasting relief.

Forgot His Haughtiness

New York Hotel Doorman Took Tip From Scrubwoman

Anna Golen, scrubwoman, made her grand gesture the other day. Anna was one of 23 New Yorkers who gathered at the Hotel Roosevelt to receive public awards in the Panama International Sweepstakes. She had advised, in advance, that she has no truck with cheques, and that she would prefer to take her $3,578 in cash.

Accordingly, Anna was handed a tremendous roll of bills amid great ceremony. As she came through the revolving doors to the street, she encountered a barrel-chested, gold-braided doorman who gave her a haughty glance as though to say: "Why don't you use the servants' entrance?"

Anna looked him over coldly. She pulled out her roll of bills. She held off a five.

"Here, young man!" she said. "Go get yourself a haircut."

He took it.

Montreal Cabbies

With the marked decrease in the number of cabmen's licenses issued in Montreal last year, the question of allowing motor vehicles to travel on Mount Royal again looms as a contentious issue. Last year, according to Mr. Lamoureux, who is in charge of the permit department at the city hall, there were only 96 cabmen's licenses which is a decrease of 25, as against the figure for the preceding year.

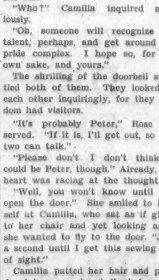
Wins Unique Contest

Pipe smokers bestowed their praise on G. F. Jones, winner of a most unique contest at Calgary. By keeping his pipe alight continuously for one hour and 32 minutes he defeated 185 contestants in a race for a title of sorts. Only one match was used.

About 730,000 seeds a year are produced by the false flax plant.

Rheumatism

is caused by failure of kidneys to remove uric acid poisons from the blood. Gin Pills relieve by neutralizing this acid and restoring the kidneys to normal action — 50c a box at all druggists.



To Carry Pilgrims

Cunard Liner To Make Trip From New York To Buenos Aires Next Fall

A special sailing of the Cunard liner, Franconia, at present on her cruise around the world via the Southern Hemisphere, will be made next fall from New York to Buenos Aires to carry pilgrims to the Eucharistic Congress to be held there.

The Franconia will leave New York on September 18th and will call at Havana, Cuba; Port of Spain, Trinidad; and Rio de Janiero, Brazil, on her way to the Argentine capital, where she will arrive on October 10th.

Here the ship will remain for four and one-half days, serving as a hotel for the passengers and allowing ample time to attend the ceremonies conducted by the Eucharistic Congress, as well as to enjoy the beauties of the largest city in the Southern Hemisphere, the metropolis of South America, popularly known to travelers as B.A. The city has a population of considerably more than two million, exceeding Rio de Janeiro by nearly six hundred thousand.

Buenos Aires is a combination of Paris, New York and Chicago. In architecture it resembles the French capital, also in the style of gayety that makes Paris the mecca for Europeans. In wealth and love of amusement it is like New York. In industry it reminds the traveler of Chicago, being like the American city, a meat-packing centre. One fourth of Argentina's population lives in Buenos Aires, the largest latin city in the world.

A unique feature of Buenos Aires is that it is a paradise for women. Here the men outnumber the fair sex five to one. Thus the scarcity of women adds to their popularity. With beautiful Spanish or Italian eyes, and a sparkle therein that would do honour to Madrid or Rome, these lovely Argentine women are virtually like princesses. They are not won by mere smiles, as is the case in countries where girls are plentiful.

Buenos Aires is situated one hundred miles up the Rio de la Plata, which river here looks more like a bay, being nearly thirty miles wide. The city is flat, and is between sixty and seventy feet above sea level. The name, Good Air, fits it perfectly.

Buenos Aires is modern and attractive in appearance. The cathedral is a noteworthy structure and commands a beautiful location. The Teatro Colon is an architectural masterpiece. Avenida Mayo, the city's main thoroughfare, is declared to be the finest street in the world. Traffic on the Calle Florida, also called the city's Fifth Avenue, is suspended between the hours of 4 and 7 p.m., when it is safe and fashionable promenade. Hotels are numerous and of a high order. Horse racing is the national sport and is conducted throughout the year.

South America's greatest daily newspaper, La Prensa, is published in Buenos Aires. The building which houses it will make return calls at Rio de Janeiro, Port of Spain and Havana, reaching New York on November 1st. The entire voyage will occupy forty-seven days.

The travel arrangements are under the jurisdiction of Thos. Cook & Son, the American Express Company and the Cunard Line.

THE RHYMING OPTIMIST

By Aline Michaelis

EXPLORERS ALL

Though on no unknown seas do we embark,
Nor do we search for any fabled land,
Down treacherous streams in forests deep and dark,
Or stumble, parching, over desert sand;
Yet still we are explorers all, who grope
Through the strange continent of self and hope
The wells of beauty and the source of love
And roll's most secret ways that twist and wind.

We are explorers all, with flags unfurled
In conquest where we gain our being's springs
And glimpse the promise of another world,
God's infinite realm which around our small self sings.
How far men journey all earth's lands to win,
But farther they who thread the maze within!

Unusual But True

So unusual is it to have a no-accident year on streets of large centres that Belleville's record without a fatality in 1933 raised doubts and brought a request for a check-up to Chief Kidd for verification of the report. Fortunately it was true. The chief constable was able to notify the registrar of the Motor Vehicles in Ontario that there were no motor fatalities in this city during 1933.

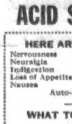
The Isle of Wight last year had more sunshine than in any twelve-month since 1886.

HOW TO FIND OUT IF YOU HAVE ACID STOMACH

HERE ARE THE SIGNS:

Nervousness	Frequent Headaches
Neuralgia	Feeling of Weakness
Indigestion	Sleeplessness
Loss of Appetite	Mouth Acidity
Nausea	Sour Stomach
	Auto-Intoxication

WHAT TO DO FOR IT:



TAKE—2 teaspoonfuls of Phillips' Milk of Magnesia in a glass of water every morning when you get up. Take another teaspoonful 30 minutes after eating. And another before you go to bed.

OR—Take the new Phillips' Milk of Magnesia Tablets — one *tablet* for each teaspoonful as directed above.

If you have Acid Stomach, don't worry about it. Follow the simple directions given above. This small dosage of Phillips' Milk of Magnesia acts *at once* to neutralize the acids that cause headache, stomach pains and other distress. Try it. You'll feel like a new person.

But—be careful you get genuine *Phillips'* Milk of Magnesia, or *Phillips'* Milk of Magnesia Tablets when you buy—25c and 50c sizes.

ALSO IN TABLET FORM

Each tiny tablet is the equivalent of a teaspoonful of Genuine Phillips' Milk of Magnesia.

MADE IN CANADA

Phillips' Milk of Magnesia

Little Helps For This Week

"I was afraid and went and hid thy talent in the earth, lo, there thou hast that is thine." Matthew 25:25.

Time was I shrank from what was right,
From fear of what was wrong;
I would not brave the sacred fight,
Because the foe was strong.

But now I cast that finer sense
And sober shame away.
Such dread of sin was indolence,
Such aim at heaven was pride.
—J. H. Newman.

If the really devout man falls into some error he does not fret over it, but rising up with a humble spirit he goes anew on his way rejoicing. Were he to fall a hundred times in the day he would not despair, he would rather cry out lovingly to God appealing to His tender mercy and pity. The really devout man has a horror of evil, but he has still greater love for that which is good, he is more set on doing right than avoiding wrong. Generous, large-hearted, he is not afraid of danger in serving God, and would rather run the risk of doing His will imperfectly than not strive to serve Him lest he fail in the attempt.—Jean Nicolas Grou.

New Russian Loan

Big Domestic Loan Running Ten Years Announced By Soviet Government

The issuance of a new domestic loan, aggregating 3,500,000,000 rubles and running 10 years, had been announced by the Soviet government.

It will be known as "the loan of the second year of the second five-year plan" and carries the optional choice of either a lottery or interest bearing bonds, which will pay 10 per cent. annually.

British Grant For Horse Breeding

The British war office has sanctioned a grant of $35,000 for encouragement of light-horse breeding this year. A special amount is set aside for native pony breeds in danger of extinction.

The French knew the Ohio river as "La Belle Riviere."
